## “Conveyors”

In our range we have different types of "conveyor belts". From plastic to modular to toothed belts to wire belt. These conveyors are designed completely on customer specifications. Some examples of previously delivered conveyor belts for the transport of eggs, chicks, meat, pizza recommended s. In the picture below are some examples.

### REVISION

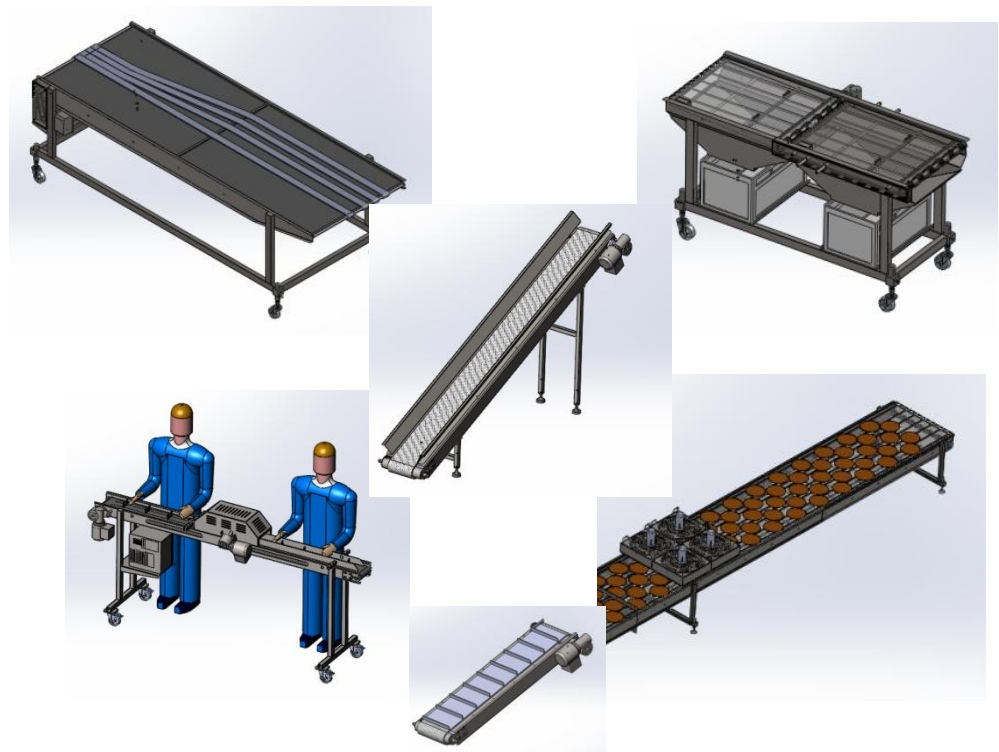

A regular review of your machines reduces the possibility of failure and improves the production process.

### PURCHASE/SALE

To buy or sell new or used equipment in the meat industry and food you can rightly in P. Verbruggen.

### DESIGN

Together with our qualified mechanical staff design your new machines or modifications to existing machines. All this for an improvement of your product or production process.

### Customer specific

Thanks to a flexible organisation we are able to work with you in a very short way to come to the right choice conveyor. After this we will be able to present a beginning design with the correct recommended height s drive imports and exports etc. After this we can make a quotation .

### Price quality ratio

The frame we build consist always complete of Stainless steel. In this way this frame is always higher than the price of an aluminum or steel frame. But the strength and the durability against this is many times higher. Also the ability to make changes or additions on the frame will be easier. For example, placing a "blowing system" on the conveyor.
